Senior Frontend Engineer with 6 years of experience **developing** high-stakes financial platforms and global e-commerce engines.

Expert in **React, TypeScript, and Next.js**, specializing in **Micro-frontend architectures** and high-performance **SSR**.

I focus on delivering complex engineering projects that drive real business results.

Proven track record of **architecting scalable systems** and delivering **measurable conversion growth** through optimized UI state management and performance tuning.

Outside of work, I actively participate in hackathons and tech conferences.

EXPERIENCE

Frontend Developer, FarFetch (Global Luxury Fashion Marketplace, \$4B+ Merchandise Value)

May 2024 - April 2026

- Contributed to migrating the high-traffic PDP to **Next.js App Router**, transitioning legacy data-fetching to Server-Side Rendering (SSR).
- Developed streaming media galleries with **React Suspense**, reducing **Time to Interactive (TTI)** by **28%** for users on low-bandwidth connections.
- Engineered a sticky add-to-cart orchestrator using the **Intersection Observer API**, driving a **1.2% conversion uplift** by ensuring checkout actions remained persistently available on mobile.
- Led a domain-wide **Accessibility audit** for WCAG 2.1 AA compliance ahead of the 2025 European Accessibility Act.
- Standardized E2E testing with **Playwright** for the global checkout funnel, covering complex multi-origin shipping scenarios and reducing regression errors by 16%.
- Mentored and **onboarded 2 junior developers**, establishing clear development practices to ensure high-quality delivery across the team.
- Implemented a **lazy validation** layer in the cart using **TanStack Query** to perform targeted background stock-checks for low-inventory items, preventing checkout errors.

Frontend Developer, Qonto (Leading European Business Finance Solution, 500k+ active companies)

October 2020 - March 2024

- Engineered a micro-frontend architecture** to decouple core banking modules, reducing development costs by 25% and enabling independent team scaling.
- Architected a high-complexity **KYC Onboarding Engine** using XState, managing dynamic branching logic for 8+ European regulatory frameworks.
- Developed a Dynamic Form Generator** that rendered UI fields based on backend JSON schemas, reducing time-to-market for new country launches by 40%.
- Refactored the core Transaction Dashboard using **virtualization**, enabling seamless interaction with datasets exceeding 10,000+ monthly records.
- Led the migration from Webpack to Vite**, reducing local cold-start times by 70% and optimizing the CI/CD pipeline for 40+ frontend engineers.
- Built and maintained the internal UI-Kit in Storybook**, migrating legacy styles to a high-performance CSS Modules architecture.
- Integrated **Sentry** for real-time error tracking across the platform, reducing the **mean time to detect (MTTD)** bugs from 3 days to under 24 hours.

EDUCATION

AGH University of Krakow

B.Sc. in Computer Science | 2018-2022

SKILLS

- Core Development:** JavaScript, TypeScript, React, Redux Toolkit, Zustand, React Query, React Router, React Hook Form, Zod

- **Server-Side & APIs:** NodeJS, Express, Socket.IO, REST, GraphQL, Axios, Strapi, Postman,
- **UI/UX & Styling:** HTML5, CSS3, CSS Modules, Tailwind CSS, Material-UI, HeadlessUI, Shadcn, Storybook, Figma
- **Testing & Optimization:** Vitest, Jest, React Testing Library, Playwright, Sentry
- **Other:** Micro Frontends, CI/ CD, Docker, GitHub Actions, Git, Vite, Webpack

LANGUAGES

English fluent (C1)

Polish (B1)
