SUMMARY

Aspiring engineer with **5 months** of **experience** at LiviDigital shipping production features alongside senior teams. Developed a multi-step survey engine that **boosted user feedback by 40%** and refactored pricing architectures to reduce support overhead by 25%. Focused on building high-performance, type-safe applications that drive measurable business value

WORK EXPERIENCE

LiveDigital

Jul 2025 – Nov 2025 (5 month)

- **Subscription Logic & Migration:** Engineered the integration of **6 new subscription tiers** (Enterprise, Promo, Beta-Test); successfully migrated existing user segments to the new plan architecture, ensuring **100% data integrity** and expanding pricing flexibility.
- **Revenue Automation:** Refactored the pricing and licensing module using React, migrating manual sales to an automated checkout flow that **reduced support tickets by 25%** and boosted immediate purchases.
- **Analytics Engine:** Developed a multi-step survey system integrated with **NestJS** and **ClickHouse**, increasing user feedback collection **by 40%** and providing critical data for product improvements.

SKILLS

Frontend Architecture	React, TypeScript, Next.js (App & Pages Router), Redux Toolkit, Zustand, TanStack Query, React Hook Form, Zod
Backend & Databases	Node.js, NestJS, Express, PostgreSQL, MongoDB, Prisma ORM, Redis, REST & GraphQL APIs
UI / UX & Design Systems	Tailwind CSS, Shadcn/ui, Material-UI, CSS Modules, Storybook, Figma
Testing & Performance	Vitest, Jest, Playwright, React Testing Library, Code Splitting, Lazy Loading, Lighthouse Optimization
DevOps & Tools	Docker, Docker Compose, GitHub Actions (CI/CD), Git, Vite, Webpack, Strapi (Headless CMS), Postman

PERSONAL PROJECTS

Real-time Messenger — Vite, C#/.NET, SignalR, Docker, DigitalOcean

- **Real-time Infrastructure:** Built a bi-directional messaging engine using **SignalR** and **TanStack Query**, implementing optimistic updates for a zero-latency user experience.
- **Security & Auth:** Engineered a secure authentication flow using **JWT Access/Refresh** token rotation and Azure Cloud for encrypted asset storage.
- **DevOps Pipeline:** Architected a Staging/Production **CI/CD workflow** via GitHub Actions, automating Docker deployments to a **DigitalOcean VPS** via GHCR and SSH.

Next.js 16 Fullstack Blog — Next.js 16, Strapi, PostgreSQL, RSC

- **Hybrid Rendering:** Leveraged Next.js 16 **Partial Prerendering** (PPR) to combine high-speed SSG shells with dynamic SSR components for optimal performance and **SEO**.

- **On-Demand Revalidation:** Implemented **Strapi webhooks** to trigger instant cache invalidation via `revalidateTag`, enabling real-time content updates without full site rebuilds.
- **Performance Architecture:** Utilized React Server Components (RSC) and the latest "use cache" directives to minimize client-side JavaScript and achieve **sub-second page transitions**.

EDUCATION

AGH University of Kraków

Kraków, Poland *B.S. in Computer Science*
